SomaStream E-learning Solutions

for Corporate Training, Higher Education Instruction and Workshop Instruction

The benefits to implementing an e-learning solution are not only a reduction in the associated costs of training but also the flexibility given to the learner. With an e-learning solution your audience can now access your training any time and anywhere.

The reduction in instructional costs, the flexibility given to the learner, and the proven results provided by online learning are why many are turning to an e-learning solution.

At SomaStream Interactive we will help you make that transition.

How is e-learning currently being used?

Business

Currently Corporations are using e-learning as an effective way to boost employee performance, enter new markets, speed new application adoption, improve customer service, and ensure employee compliance.

Education

In Education, e-learning is being used as a way to offer instruction in a flexible and yet effective manner. Initially, time and distance barriers made it virtually impossible to further one's education. With e-learning solutions these barriers no longer exist. Now one can access class content anytime and anywhere.

Workshop Providers

The types of organizations that hold workshops for training runs the gamut. But their solution for providing an alternate means of attendance is the same, an e-learning solution. With the use of streaming video and audio technology, organizations can offer the public an opportunity to attend workshops, seminars and lectures from the comfort of their own home - time and distance are no longer barriers.

How do you want to use E-learning?

So you know you need to implement an e-learning solution, but just don't know where to start. Let us help.

Our staff is comprised of the best in the industry, who can take you from concept to the deployment of your e-learning solution.

After it is determined what your specific E-learning needs are, SomaStream can either develop a customized E-learning solution or implement an already existing learning solution.

SomaStream employs a performance development process for developing all e-learning solutions. The process is based on instructional systems theory and methodology and includes four phases: Define, Design, Develop, and Deliver. The design and development phase can encompass video/audio production as well as conversion of existing media for online delivery if need be.

So whether you are a business, educational institution, or workshop provider Somastream will ensure our e-learning solution meets your needs.

The SomaStream Advantage

When it comes to implementing an e-learning solution, experience matters. At SomaStream we have a seasoned team of instructional designers who understand that learning approaches that work well in the classroom must be adapted to work well online.

Our staff is comprised of individuals who are leaders in their field and it reflects in the solutions we provide to our customers.

In addition to our experience, our aim at SomaStream is not only to build your solution but to ensure that you are achieving the results you intended. This being one of our primary concerns, we intend to be with you every step of the way.

Learn More Today

The true power of e-learning lies in it's ability to deliver results that matter to you. Whether your aim is to offer student flexibility, enhance worker performance, or provide an alternative access point to your content, SomaStream will create the solution which will cater to your needs.
